

## **EthernetConnect**

EthernetConnect is CytaGlobal's International Ethernet over MPLS Service that offers connectivity to our customers' networks from almost anywhere in the world. Through EthernetConnect and the use of our international private MPLS platform, our enterprise customers can enjoy all benefits of Ethernet technology, extending their LAN infrastructure through WAN connectivity. The rates offered are starting from as low as 128kbps up to 1Gbps. EthernetConnect supports point-to-point configurations (E-Line) and is considered the ideal solution for business networks that utilise Ethernet technology.

- Reliability

The reliability of the product is achieved through international and national network diversity and protection. The performance parameters like service availability, throughput, latency, jitter are secured through EthernetConnect service level agreement.

- Scalability

EthernetConnect offers fully scalable solutions requiring minimal investment from the customer. Bandwidth upgrades can be achieved within minimum lead times and according to our customers' network growth, without any service interruptions.

- Security

EthernetConnect is utilising CytaGlobal's international private MPLS platform. The services activated are completely independent from each other so that our customers' networks benefit from security equivalent to the traditional dedicated leased services.

- Centralised Management

EthernetConnect is monitored 24/7 through a centralised management system. All SLA parameters are monitored and feedback is provided to the customers. Our customers can also have access to the statistics of their services.

- Cost Effectiveness

EthernetConnect Service is offered to our enterprise customers in extremely competitive prices, benefitting from the statistical nature of the MPLS technology.
